Problem Statement

The current library book request process is mostly manual, making it difficult for students to request books and for librarians to manage requests efficiently. There is no proper system to track requests, generate request numbers automatically, validate issue dates, or notify the librarian. To solve these problems, the **Library Book Request System** is developed using ServiceNow to automate the request process and improve efficiency.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A college student	Request a library book online quickly.	The current process is manual and takes a long time.	There is no online system to submit and track book requests.	Frustrated and uncertain about the request status.
PS-2	A librarian	Manage students' book requests efficiently	Requests are maintained manually, which is time-consuming.	There is no automated system to generate request numbers, validate issue dates, or send notifications.	Overloaded with paperwork and concerned about delays and errors.
