

Project Design Phase Solution Architecture

Date	03 July 2026
Team ID	
Project Name	Library Book Request System using ServiceNow
Maximum Marks	4 Marks

Solution Architecture

The proposed solution is developed on the **ServiceNow platform** to automate the library book request process. Students access the application through the ServiceNow web interface and submit a book request by entering the required details. The system validates the issue date using a Business Rule to ensure it is not in the past. Another Business Rule automatically generates a unique request number for each request. The request is then stored in the ServiceNow database, and an email notification is sent to the librarian. The librarian can view and manage all submitted requests through the ServiceNow application.
